Curaçao

54. Candidates for election to Parliament in 2002 included 39 women and 165 men. Women headed the lists of three of the eleven political parties. Candidates for election to the Island Council in 2003 included 48 women and 161 men. Women headed the lists of two of the eight political parties.

Bonaire

55. Candidates for election to Parliament in 2002 included 11 women and 29 men. Four political parties participated in the election. Candidates for election to the Island Council in 2003 included 20 women and 55 men. 6 political parties participated in the election.

Sint Maarten

56. Candidates for election to Parliament in 2002 included 3 women and 20 men. A woman headed the list of one of the three political parties. Candidates for election to the Island Council in 2003 included 23 women and 66 men. Women headed the lists of two of the seven political parties.

Sint Eustatius

57. Candidates for election to Parliament in 2002 included 8 women and 18 men. A woman headed the list of one political party. Four political parties participated in the election. Candidates for election to the Island Council in 2003 included 10 women and 17 men. Four political parties participated in the election. A woman headed the list of one political party.

Saba

58. Candidates for election to Parliament in 2002 included 4 women and 10 men from two political parties. Candidates for election to the Island Council in 2003 included 7 women and 16 men from three political parties.

59. At central level, during one of the changes of government a woman was appointed Prime Minister of the Netherlands Antilles. On Curaçao the Governor of the Island is a woman and during one of the changes of government during this period a woman was also appointed Acting Governor. A woman has held the post of Acting Governor General for over a decade.

60. A number of women are department heads at both Central and Island level. As it happens, a majority of heads of government departments on Sint Eustatius are women.

Article 8

61. Reference is made to previous reports.

62. During the reporting period four men and three women were seconded to the Foreign Service of the Kingdom of the Netherlands .

63. When attending meetings at international level the government sends the person or persons who is/are best qualified to represent the Netherlands Antilles . Selection is not based on gender.

Article 9

64. Reference is made to previous reports.

Part III (articles 10-14)

Article 10

65. Fully conscious of the role and function of education in the process of national development, the Antillean government has exerted itself over the past ten years to make improvements in education, both in institutional frameworks (legislation, organization and structure) and in actual content (developing new course books and curricula and upgrading teaching staff). It has also devoted a great deal of attention to structuring and optimizing cooperative frameworks between the islands and between the Netherlands Antilles and the Netherlands .

Legislation

66. National decrees were promulgated on junior secondary technical education (LTO), junior secondary vocational education (LBO), pre-vocational education (BVO) and junior secondary home economics education. The draft national ordinance on educational experiments (*Ontwerp-Landsverordening Onderwijskundige Experimenten*) was submitted for approval to Parliament, creating a legal basis for future educational experiments. The new draft national ordinance on the country's official languages (*Ontwerp-Landsverordening Officiële Talen*) incorporates all previous drafts on this matter, including the draft national ordinances on Papiamentu and Dutch spelling. This opens up the possibility of regulating the spelling of English as well at some time in the future. In addition, guidelines have been drafted for school regulations, the number of examination subjects in pre-university education (VWO) has been increased from six to seven, and the number of hours timetabled for religious education has been increased from one to two a week.

Teacher training

67. An agreement was reached with the IPSO (Teacher Training College) about short vocational courses as a possible solution to the shortage of teaching staff. A further training plan was drafted for basic secondary education and a start was made on extra training for all junior general secondary education (MAVO) teachers as part of the Dutch language project *Anders Nederlands* , and in mathematics.

68. The key changes since 1998 have been: the introduction of basic secondary education; preparations to introduce new-style education for children aged 4 to 15 (*funderend onderwijs*) and changes to secondary and vocational education.

Introduction of basic secondary education

69. The principle behind basic secondary education is that pupils should receive a general education in their first two years at secondary school. This implies, for instance, that all pupils attend the same number of classes in the same subjects, regardless of the type of education (pre-vocational secondary education (VSBO), combining pre-vocational education (BVO), junior secondary technical education (LTO) and junior general secondary education (MAVO), or senior general secondary education (HAVO)/pre-university education (VWO)). In the Netherlands Antilles, unlike the Netherlands , teaching materials and course books have always been attuned to the level of education (i.e. VSBO (BVO, LTO and MAVO) or HAVO/VWO). Basic secondary education was introduced in the 1998 ■ 1999 school year.

Introduction of new-style education for children aged 4 to 15

70. Educational reforms do not arise in a vacuum, but are devised as answers to shortcomings in the education system brought to light by evaluations. When evaluating education, the key question is whether the educational objectives have been achieved. In general, education is expected to fulfil three objectives:

at individual level: to contribute to personal development;

at the social and cultural level: to prepare pupils to function effectively in society;

at the socioeconomic level: to prepare young people to work in a given occupation.

71. To achieve the aim of giving every child at every school in the Netherlands Antilles a firmer basis through education, with the lingua franca in schools being Papiamentu on the Leeward Islands and English on the Windward Islands, the then education minister instructed the Department of Education to draft a detailed multi-stage plan in 1994. This led in March 1995 to a policy and multi-stage plan for the renewal of primary education in the Netherlands Antilles entitled *Stappen naar een Betere Toekomst* ('Towards a Better Future'). The plan is based on the guiding principles, points of departure and objectives for education on the Netherlands Antilles set out in the education policy memorandum 'Education for One and All' and the Constitution of the Netherlands Antilles. The cooperation protocol also served as a frame of reference for the plan, devised by the minister and representatives of the education sector.

72. In 1997 a plan was drafted on the basis of the multi-stage plan, introducing new-style education for ages 4 to 15. It provides for a programmatic structure to shape the implementation of this new-style education from the moment of decision-making up to and including aftercare, and to monitor its progress.

73. A third plan was subsequently drafted in February 2002 defining structural frameworks for primary and secondary education. It endorsed the national goals for education and built on the outlook, mission and objectives of education for ages 4 to 15 as described in the two earlier plans. Setting guidelines for people in the field, it identified and described the various factors involved, providing a general picture of what schools should look like in practice. The new system of education for ages 4 to 15 was finally introduced in the Netherlands Antilles in the 2002-2003 school year.

Problems in nursery school and primary education in the Netherlands Antilles

74. New-style education for ages 4 to 15 seeks to resolve the problems that have been identified in Antillean nursery and primary schools, namely:

high dropout rates;

the large number of children repeating a year;

the large proportion of pupils referred to special schools;

the small numbers of pupils going on to general secondary education.

75. These problems have been attributed to the following causes:

a lack of clarity concerning educational objectives;

classes taught in a language that is not the mother tongue of either pupils or teacher;

the system of teaching the same set material to all the pupils in each year, which takes too little account of differences in individual ability, experience and rate of development;

the rigid system of whole-class teaching, which leaves little scope for individual attention;

teaching aids which are generally poor-quality and in short supply;

curricula which are completely out of date;

school buildings which have numerous shortcomings;

the lack of parental interest in what happens at school;

neither schools nor teachers are properly equipped to help socially disadvantaged pupils or pupils lacking a good command of the school's lingua franca;

the lack of space allotted in the curriculum to pupils' physical, expressive and social development;

(in some cases) dysfunctional school management;

the lack of professional development and supervision of teachers;

operational problems within the organizational structure of schools.

Educational objectives of new-style education for ages 4 to 15

76. New-style education for ages 4 to 15 has the following educational objectives. It must lay foundations on which Antillean citizens can build their lives. Hence, the primary objective is to provide a general education within the context of Antillean society, the Caribbean region, and the world at large. Within a timespan of 10 years, Antillean children are to be taught skills, attitudes and values that will help them throughout their lives, even if they do not continue formal education afterwards. Besides literacy and numeracy skills, children must also learn assertiveness, flexibility, responsibility, helpfulness, independence and self-confidence to enable them to participate fully, and in a spirit of fellowship, in the cultural, social, political and economic life of the Netherlands Antilles, within the Kingdom, the Caribbean region, and the world at large. The aim must be to instil the knowledge, skills and understanding that will lay the foundations for personal development and help children become effective members of society. This will also provide a basis on which subsequent education can build. To encourage personal development, young children must be given the scope to achieve their full intellectual, moral, social, emotional and artistic potential, as well as developing motor skills. To achieve these goals, teaching must initially be attuned to children's everyday lives, encouraging and satisfying their natural thirst for knowledge, and then go on to transcend their world.

Characteristic features of new-style education for ages 4 to 15

77. To achieve these new goals, education for ages 4 to 15 must meet the following criteria:

It should extend the period of shared, basic and non-selective education to cover all pupils aged 4 to 15, thus postponing any definite decisions on training and occupation. This will lay stronger foundations for any subsequent education and for joining the employment market.

It must provide an uninterrupted and non-selective pathway of learning, divided into three successive stages focusing on the age groups 4 to 8 (first stage), 8 to 12 (second stage) and 12 to 15 (third stage), with regular evaluations to monitor quality.

Existing nursery schools must be integrated into the reception classes of primary schools to constitute the first stage of education. Given the natural developmental process of children, it makes sense to regard the period from 4 to 8 years of age as one cohesive stage of development. This also eliminates adjustment difficulties between nursery and primary school. In the preparatory phase, it will be important to ensure that all schools are properly equipped for the entire age group.

The first two years of secondary school are to be converted into the last two years — the third stage — of new-style education for ages 4 to 15.

The language of instruction must be that spoken by the majority of the population: Papiamentu for the Leeward Islands and English for the Windward Islands .

Flexible progression by abandoning the system of standardised material for each school year.

Greater individualization by using differentiation in groups.

Integration of special education (i.e. schools for children with learning and behavioural difficulties) into mainstream education.

Expanding the scope of education by introducing a wider range and spread of subjects — both theoretical and practical — in the third stage, and by paying more attention to developing pupils' social, cultural, technical, artistic and physical skills.

A greater emphasis on orientation towards society at all three stages.

New-style education for ages 4 to 15 in practice

78. The new system adopts a holistic approach to children, whose physical, social, emotional, cognitive

and spiritual development is seen as closely interconnected. Although children generally go through the same stages of cognitive development, each is nonetheless a unique individual with a specific pace of development and style of learning. This means that each child has a specific developmental pathway, and that teachers should encourage and supervise them and help them to follow it — allowing scope for, and appreciating, each child's pace of learning and learning style. Every child must be valued for what he or she can do. One distinctive feature of the new system is flexible groups of different ages. An important goal here is to create a 'community of learners', every member of which is given encouragement and support. In the first stage these groups may include children aged 4 to 6, for instance, or 5 to 7, thus providing more scope for interaction among children of different ages and breaking away from the old system of offering standard material to each age group. The groups are formed on the basis of shared interests or a particular subject, not according to learning ability or age. So groups are heterogeneous in terms of sex, age and skills. This flexible system of grouping teaches younger children to work together with older children, who have acquired a more 'mature' approach to learning. The older children model themselves on their teachers in their role as mentor, and take the initiative to 'teach' the younger group members. The advantage is that in taking the lead, the older child will acquire more self-esteem and self-confidence. This is significant to, and influences, the 'zone of proximal development', the gap between actual development and the level of potential development that can be fostered by the teacher, a peer or another group member. The implication is that a younger child can be temporarily helped to carry out tasks that are beyond his or her real capabilities. Since the teacher focuses on the child's development and sees it as a continuous process, there will be no need to repeat years. Each child's individual development is stimulated, with the teacher in the facilitator's role.

79. Proceeding from the basic premise that learning is a process in which the child constructs knowledge, curriculum goals are selected on the basis of the child's individual needs, interests and strengths. Teachers devise a child-centred curriculum. In order to follow and document the child's development and progress, teachers use qualitative reporting instruments such as portfolios, anecdotal annotations, observations, journals and videotapes. No use is made of tests, whether standardised or devised by the teacher, nor of any textbooks or course books. Instead teachers focus on each area of development, evaluating children in terms of their progress and potential. The child's results are not compared with averages. Since pupils keep the same teacher for several years, the teacher can build up a good picture of every aspect of their development.

80. Teachers can record the child's development in a graph or verbal report. This development is documented using quantitative instruments that serve as a basis for supporting and instructing children on the basis of their individual needs. This method enables children to see themselves as competent learning individuals.

Changes in secondary education

81. Secondary education is being modernised with the following aims:

to raise standards and to ensure that education is better attuned to society's social, cultural and economic needs;

to eliminate problems with a view to improving and safeguarding quality;

to find an adequate response to new demands arising from the radical economic and technological modernization that accompanies the development of a knowledge-based economy;

to safeguard opportunities for pupils to pursue further courses of study at home or abroad, especially in the Netherlands .

Reform of pre-vocational education (BVO) and junior general secondary education (MAVO)

82. Both BVO and MAVO exhibit many failings that suggest that they are poorly attuned to pupils' cultural and social backgrounds.

83. The reform of BVO and MAVO is geared towards:

modernizing education;

creating a smooth transition from basic secondary education to secondary vocational education;

improving the transition from BVO and MAVO and other forms of secondary education to society and the labour market;

safeguarding the link between pre-vocational education and sectors of the labour market by providing wide-ranging programmes that are attuned to work. In some cases this makes it possible to postpone career choices. Wide-ranging programmes help to meet demand while addressing problems of scale.

84. The modernization of BVO and MAVO courses will consist of their merger into pre-vocational secondary education (VSBO), after which students can go on to secondary vocational education (SBO). A start was made on this merger in the 2002-2003 school year.

85. The idea is to ensure that content is better attuned to subsequent stages of education. To put VSBO in place, study programmes are to be set up, with coherent sets of exam subjects for each sector. Subject content will be harmonised with basic secondary education and developed within the context of the quality structure of the SBO. In due course, pupils will choose a sector as well as a study programme. Three sectors will be distinguished within VSBO:

technology;

health;

economics.

In addition, each sector will have a range of occupationally-oriented programmes.

86. To improve the link between VSBO and the social context of the Netherlands Antilles, the Department of Education, Culture and Sport has commissioned new syllabuses.

87. To reduce VSBO dropout rates and to give all students fair and equal opportunities to complete their education successfully, structural attention will be given to the educational needs of individual students. The aim of this care structure will be to cater for differences in students' learning potential, skills and learning styles as well as their socioeconomic and cultural backgrounds, and to respond appropriately to the differences between boys and girls and the specific problems boys face at school.

88. The facilities are intended to support all students who need such assistance in their school careers to prevent them from falling by the wayside. They will enable a particular, well-defined group of students who are not expected to complete VSBO successfully to complete work-oriented education (AGO).

89. Work-oriented education will not be attuned to a particular sector but will be student-centred. Only a limited number of specially classified students will be referred to AGO, and candidates must go through a strict admissions procedure. AGO will take full account of each student's individual abilities and is intended to serve as tailor-made education, with internal and external practical work experience playing a key role.

Reform of senior general secondary education (HAVO) and pre-university education (VWO)

90. Of all the various types of education provided in the Netherlands Antilles, the current HAVO and VWO schools are modelled most closely on their Dutch counterparts. Most of their syllabuses, teaching materials and examinations come from the Netherlands.

91. HAVO and VWO is in need of renewal for three reasons: a shortage of materials and financial resources; outmoded methods of study whereby the same set material is taught to all pupils in a particular year and is not adjusted to specific needs; and a shortage of local teachers. The first pupils to have completed basic secondary education entered the third year of HAVO and VWO in the 2000-2001 school year, and had to continue their education along the same lines. So the short-term reform of these two types of education will build on the innovations already introduced in basic secondary education. The reform of HAVO and VWO has already been launched in the Netherlands, with the introduction of subject combinations. Starting in the 1999-2000 school year, teaching in the upper forms of Dutch HAVO and VWO has been based on four distinct, coherent subject combinations or teaching programmes that prepare students for similar courses in higher education. Some subjects have been integrated and new ones added to the curriculum. The schools use a new approach to teaching and examination requirements have also been revised.

92. This operation in the Netherlands has major implications for HAVO and VWO in the Netherlands Antilles. From 1 August 1999 onwards, the fourth year of HAVO or VWO will have to comply with the demands of Dutch establishments of higher education, whose entry requirements will be attuned to the new subject combinations. The old-style examinations will be valid and available in the Netherlands Antilles until June 2003 for HAVO students and until June 2004 for VWO students. Those in possession of the 'old-

style' certificates (HAVO or VWO) can be admitted to higher education in the Netherlands on their strength until the end of August 2004. If current policy is maintained, 'old-style' Dutch examinations will no longer be available after the above dates.

93. In 2000–2001 a start was made on reforming HAVO and VWO. The remaining three years of HAVO and four of VWO are now to be based on subject combinations along the lines already introduced in the Netherlands . There will be three subject combinations:

culture and society (humanities)

economics and society (social sciences)

natural sciences (science)

94. Each subject combination will consist of a common core of subjects, a specialised component and subjects to be chosen freely. Students can also decide to take extra optional subjects. The common core is largely a continuation of the subjects taught in basic secondary education, some of which are taught in an integrated form, while the specialised component is attuned to the particular subject combination. In the 'free' space, students can choose from the remaining subjects, perhaps to strengthen their particular specialism or to maximise their opportunities for further study.

Changes in vocational education

95. The changes in vocational education affect both VSBO and SBO, whereby VSBO prepares students for SBO and is hence no longer a terminal form of education. SBO is attuned to the learning pathways in VSBO and allows students to take school-leaving certificates at four different levels. More scope for learning practical skills has been built into all forms of vocational education.

96. On Sint Maarten, SIFMA provides vocational training in the education of very young children. Although this training is theoretically open to both men and women, men do not enrol for it because the care and education of the very young are still seen as "women's work" and daycare workers tend to be low-paid.

97. A programme was developed in 2002 to tackle the high school dropout rate and give young people of both sexes a second chance to complete their secondary education. Funding for the programme has now run out, however, and no alternative programmes have been developed.

98. The school system on Sint Maarten consists of international private schools, parish and government-subsidised schools, and unlicensed schools for undocumented children. The teenage pregnancy policy for secondary schools governed by the school board prohibits teenage mothers from returning to school after the birth of their second child and does not provide them with any alternative forms of education. Students pregnant with their first child agree to terms set by the management of the school. According to SIFMA, there is a high rate of teenage pregnancy on the island (approximately 13%, including undocumented mothers). To combat the relatively high incidence of drug use and sexually transmitted diseases, a Girl Power programme to help build self-esteem and educate girls on various health and emotional issues has been developed by researchers from Emory University in Georgia, the health department and other stakeholders. The stereotyped roles are slowly changing. Young men are now attending vocational courses in catering.

99. In recent years, more attention has been paid to organised childcare (both pre-school and after-school care) and provision has become more systematic. This is a subsidised responsibility of the Island authorities.

100. Curaçao has a Childcare Federation and, since 2000, a Coordination Centre for Children and Young People. After-school care is also subsidised by the island government of Curaçao (*Naschoolse Opvang Curaçao*). *Fundashon Mas Skol* (Foundation for After-school Projects) also used to provide care for children aged between 6 and 12 in certain neighbourhoods/schools, but this project was funded by the Netherlands (under its urban policy) and was terminated at the end of 2003.

Sports

101. Women participate in various types of sport (softball, athletics, swimming, etc.)

Family planning

102. Stichting Famia Plania (the Foundation for the Promotion of Responsible Parenthood) runs large-scale family planning campaigns every year. It also offers special programmes on peer counselling and community-based information campaigns.

Article 11

Equal pay for equal work

103. In a case involving Antilleans, the Supreme Court (Hoge Raad – HR) held that discriminating between married and unmarried persons with respect to pay was incompatible with article 7 of the ICESCR. It emerges from case law (HR 7 May 1993, no. 259) that article 7 is not directly applicable, but that guaranteeing equal pay for equal work is an objective that the government must work to achieve. It should not therefore be too readily assumed that there is a reasonable and objective justification for differences in pay. Marriage is too unreliable an indicator of the existence of maintenance obligations for the mere fact that an employee is married to be deemed sufficient grounds for paying a higher salary for the same work.

Equal terms and conditions of employment for women

104. In the Netherlands Antilles the right to equal treatment is guaranteed by the direct applicability in the legal system of the prohibition on discrimination contained in article 26 of the ICCPR and article 14 of the Convention for the Protection of Human Rights and Fundamental Freedoms. According to established case law, the nature of article 26 of the ICCPR – which is precisely worded and unconditional – means that it can be applied directly by the courts, in the sense that they will examine whether the application of a statutory provision is incompatible with article 26 and whether the provision can therefore be regarded as binding.

105. One important change in employment legislation has been the introduction of a number of protective provisions for domestic servants, such as maximum working hours, hours of rest and breaks, overtime provisions and paid holidays.

106. The table below gives an overview of the average monthly wage for men and women and the differences between them. The figures are based on the last three censuses. There are considerable differences between men and women in terms of earning. In 1981 women earned on average 40.7% less than men. In the years that followed, this diminished slightly, but the most recent figures show that women still earn on average 27.4% less than men. The difference thus diminished sharply in the intervening period. Nevertheless, this trend should be followed closely and deserves greater attention in policy.

Table 7 Average monthly income by gender in Netherlands Antillean guilders

	Men	Women	Difference	W omen's earnings as % of men's earnings
1981 census	1 488 882		606	59.3%

2001 census	3 146 2 135		1 011	67.9%

Source: Central Bureau of Statistics

107. Since 29 April 1999, female workers have been entitled to pregnancy leave on full pay for between four and six weeks prior to the expected date of delivery and maternity leave on full pay for between six and eight weeks after the actual delivery. Total maximum pregnancy and maternity leave is twelve weeks, of which at least six weeks must be post-delivery (irrespective of the actual duration of leave taken prior to delivery).

108. The woman herself decides when her pregnancy leave should begin, based on the expected date of delivery determined by the general practitioner, midwife or obstetrician and with due regard to the statutory provisions explained above.

109. The Civil Code of the Netherlands Antilles provides that the employer may not terminate a woman's contract of employment during the period of pregnancy and maternity leave.

Curaçao

110. On 29 January 2001, the unemployment rate was 15.8%. This was more than 1% down on the figure from the previous census in 1992 (16.9%). The rate for men was 13.7% and for women 18.0%. In 1992 these figures were 13.5% and 21.5% respectively. Among women, therefore, there had been a decline of 3.5 percentage points. However, youth unemployment among women was higher than among men: the rate for men was 30.5% and for women 37.5%.

Table 8 Labour force, participation rate and unemployment rate in census years, Curaçao

Source: Central Bureau of Statistics

112. For those with an income, the average monthly income was ANG 2,077. There is a big gap between the average incomes of men and women, with men's income averaging ANG 2,675 and women's ANG 1,558. In 1992, the corresponding figures were ANG 1,941 for men and ANG 1,081 for women. This does not mean that purchasing power increased by this absolute amount over the period: inflation has to be taken into account. According to data from the Central Bureau of Statistics, the inflation rate on Curaçao for the period between January 1992 and January 2001 was 24.8%. This means that, over the whole period, the real income of men increased by 10% and that of women by 15%. In 1992 the average female wage was 55.7% of average male earnings, but by 2001 this had increased to 58.2%. This is the lowest percentage in the Netherlands Antilles .

Bonaire

113. On 29 January 2001, the unemployment rate was 9.1%. This is somewhat higher than at the time of the previous census in 1992, when the rate was 8.3%. The rates for men and women were more or less the same, at 9.0% and 9.2% respectively. In 1992, the equivalent figures were 7.1% and 10.1%. Over the period, therefore, there was an increase of 0.7 percentage points for men and a decrease of 1.0 percentage points for women. However, youth unemployment was higher among men than among women on Bonaire (25.8% and 17.0% respectively).

Table 10 Labour force, participation rate and unemployment rate in census years, Bonaire

	1960	1972	1981	1992	2001
Employed	1,007	2,030	3,031	4,430	4,865
Unemployed	369	430	395	402	486

Participation rate	24.1	29.8	39.1	47.4	49.6
Unemployment rate	29.2	17.5	11.5	8.3	9.1

Source: Central Bureau of Statistics

114. Table 11 shows an increase of 4.6% in women's participation rate. The gap between men's and women's participation has thus narrowed from 14% to 9% between the last two censuses. Due to an increase in male unemployment, there was hardly any difference between the unemployment rates for men and women on Bonaire in 2001.

Table 11 Key labour market data for men and women

Bonaire	1992	2001				
	Men	Women	Difference	Men	Women	Difference

Source: Central Bureau of Statistics

Income

115. For those with an income, the average monthly income was ANG 1,987. There was a big gap between

the average incomes of men and women, with men's income averaging ANG 2,342 and women's ANG 1,608. In 1992, the corresponding figures were ANG 1,582 for men and ANG 979 for women. Whereas the average female wage was 61.9% of average male earnings in 1992, by 2001 this had increased to 68.7%.

Sint Maarten

116. The absolute size of the labour force on Sint Maarten was 17,777 in 2001, as against 19,336 in 1992 — a fall of 1,559. This decrease must be attributed to a significant extent to changes in population structure. The labour force appeared to be 58.1% of the total population. This is a high proportion, although somewhat lower than in 1992 (60%).

117. Over time, the participation rate has increased considerably: 30.9% in 1960; 43.7% in 1972; 49.4% in 1981 and 58.1% at present. This is largely due to increased participation by women in the labour market. On the other hand, economic activity on St Maarten has also increased considerably over recent decades.

Table 12 Labour force, participation rate and unemployment rate in census years, Sint Maarten

	1960	1972	1981	1992	2001
Employed	793	3,112	5,998	16,911	15,495
Unemployed	50	298	499	2,425	2,282
Labour force	843	3,410	6,497	19,336	17,777

Participation rate	30.9	43.7	49.4	60.0	58.1
Unemployment rate	5.9	8.7	7.7	12.5	12.8

Source: Central Bureau of Statistics

118. In January 2001, the unemployment rate was 12.8%. This was approximately the same as in 1992, when the rate was 12.5%. However, it was higher than at the time of previous censuses: in 1960, 1972 and 1981 the respective unemployment rates were 5.9%, 8.7% and 7.7%.

119. Between the 1992 and 2001 censuses, the gap between men's and women's participation rates shrank by 2 percentage points, mainly because of a decline in participation by men. Even so, men's participation on Sint Maarten remained the highest in the country. The decline was probably caused by a more even age distribution in the population.

Table 13 Key labour market data for men and women

Sint Maarten	1992	2001				
	Men	Women	Difference	Men	Women	Difference
Employed	9,337	7,574		8,332	7,163

Source: Central Bureau of Statistics

Income

120. For those with an income, the average monthly income was ANG 2,513. There was a big gap between the average incomes of men and women, with men's income averaging ANG 2,928 and women's income ANG 2,055. In 1992, the corresponding figures were ANG 2,169 for men and ANG 1,436 for women. Whereas the average female wage in 1992 was 66.2% of average male earnings, by 2001 the figure had increased to 70.2%.

Sint Eustatius

121. The proportion of the labour force in the total population is 49.5%. This is slightly higher than in 1992 (48.4%). Over time, the participation rate has increased considerably: 25.4% in 1960, 32.3% in 1972, 41.3% in 1981 and 49.5% in 2001. This is largely due to increased participation by women in the labour market.

On the other hand, economic activity on Sint Eustatius has also increased considerably over the past decade.

122. On 29 January 2001, the unemployment rate was 8.5%. This was slightly more than double the figure in the previous census (4.2%).

123. The 2001 unemployment rate was also higher than the rates shown by pre-1992 censuses, although not much higher than the 1972 and 1981 figures (8.3% and 7.3% respectively).

Table 14 Labour force, participation rate and unemployment rate in census years, Sint Eustatius

	1960	1972	1981	1992	2001
Employed	278	356	465	817	1,038

Unemployment rate	3.7%	8.7%	4.9%	7.1%	10.1%	3.0%

Source: Central Bureau of Statistics

Income

125. For those with an income, the average monthly income was ANG 2,270. There was a big gap between the average incomes of men and women, with men's income averaging ANG 2,807 and women's ANG 1,701. In 1992, the corresponding figures were ANG 1,816 for men and ANG 1,009 for women. Whereas the average female wage in 1992 was 55.6% of average male earnings, by 2001 this had increased to 60.6%.

Saba

126. The labour force, at 637 individuals, comprises 47.2% of the total population. This participation level is not much lower than that of 1992 (48.4%). Over time, the participation rate has increased considerably: 25.4% in 1960, 32.3% in 1972, 41.3% in 1981 and 47.2% at present. This is largely due to increasing participation by women in the labour market. On the other hand, economic activity has also increased on Saba over the past decade.

127. On 29 January 2001, the unemployment rate was 6.1%. This was slightly higher than at the time of the previous census, when the rate was 4.2%. In view of the small numbers involved, this indicator may not be statistically very significant.

Table 16 Labour force, participation rate and unemployment rate in census years, Saba

	1960	1972	1981	1992	2001
Employed	247	287	370	524	598

Unemployment rate	0.8	8.3	7.3	4.2	6.1

Source: Central Bureau of Statistics

128. Saba shows the same patterns of male and female participation and unemployment as the other four islands. The differentials between the two sexes decreased considerably between the last two censuses.

Table 17 Key labour market data for men and women

Saba	1992	2001				
	Men	Women	Difference	Men	Women	Difference
Employed	311	213		329	269	
Unemployed	8	15		17	22	
Labour force	319	228		346	291	
Total population	564	566		678	671	
Participation rate	56.6%	40.3%	16.3%	51.0%	43.4%	7.7%
Unemployment rate	2.5%	6.6%	4.1%	4.9%	7.6%	2.6%

Source: Central Bureau of Statistics

Income

129. For those with an income, the average monthly income was ANG 2,354. There was a big gap between the average incomes of men and women, with men's income averaging ANG 2,882 and women's ANG 1,754. In 1992, the corresponding figures were ANG 1,755 for men and ANG 1,075 for women. The average female wage in 1992 was 61.3% of average male earnings and in 2001 it was more or less unchanged, at 60.9%. So Saba is the only island where income differentials between men and women have not diminished over the last decade.

Article 12

130. The Medical and Public Health Service on Sint Maarten has conducted a health survey which shows that women are a priority target group. The Medical and Public Health Service's priority is to promote primary health care and healthy living, with a specific focus on monitoring women's health in cooperation with physicians and insurance companies.

131. The Sickness Insurance Act applies to all employees whose income is below a certain limit. For 1993 the limit was set at ANG 2,771.60. In 2003 it was set at ANG 3,758.60 and in 2004 at ANG 3,842.80.

132. In the event of illness, the insurance provides free medical care, including maternity services, and paid sick leave. The entitlement to medical care lasts for two years from the date on which employees report sick and includes medical (general practitioner and specialist) examinations and treatment, nursing and all unavoidable costs directly linked with the illness. On 1 January 1996 the two-year limit on the entitlement to medical care was abolished. Dental surgery is covered provided that it is not necessitated by tooth decay.

133. The entitlement to sick pay expires two years after the date on which employees report sick. As of 1 January 1996, Parliament set sickness pay at 80% of the daily wage for all employees (male and female), whether or not they are being treated in hospital.

134. In 1996 Parliament approved a number of changes in the field of social security, as set out below.

135. As of 1 January 1996 employees who lose their jobs are also, under certain conditions, insured against illness. An employee's family (wife and children) are also insured against illness through the breadwinner.

136. Contributions for insurance are paid in full by the employer and amount to 8.3% of the employee's pay. The employee must contribute 2.1% of his pay to cover family members. The island governments contribute 2.1% of the total pay of all employees for the insurance covering ex-employees and their family members.

137. Employees, ex-employees and their family members may appeal against any decision taken by the

Social Insurance Bank (SVB). As of 1996 they must first lodge an objection to the decision with the SVB. If the SVB's response is considered unsatisfactory or if the response is delayed, under the National Ordinance on Administrative Procedures a written protest may be submitted to the Director of the Social Insurance Bank within six weeks of the date on which the SVB's decision was issued or sent. Complainants can also apply for a judicial review on the island on which they are resident. This application must be submitted within six weeks of the date on which the SVB decision was issued or sent.

138. The Old-Age Insurance Act provides for compulsory insurance against the financial consequences of old age for the entire population of the Netherlands Antilles. Under its provisions, insured persons receive an old age pension on reaching the age of sixty.

139. As a result of amendments to the Old-Age Insurance Act, effective from 1 January 1996, anyone who reaches the age of 60 and is insured has an independent entitlement to a pension, irrespective of his/her civil status. In the case of married couples where the person entitled to a pension is 60 years or older, but his/her partner has not reached pension age, the partner will receive an allowance provided their joint income does not exceed ANG 12,000 annually.

140. If a person entitled to a pension/allowance dies, a lump sum equal to four months' old-age pension will be paid to eligible dependants, in accordance with standards of fairness. Everyone who qualifies for a pension receives a Christmas bonus in December, amounting to 100% (as of 2001) of the monthly pension they were entitled to in the period preceding September of that year.

141. The old-age insurance contribution is 4.5% of the employee's income, with no contribution payable on income in excess of ANG 45,427.20 per year. The contribution is deducted by the employer and remitted to the SVB. Applications for review may be lodged with the Court of the island territory.

142. The widow(er)'s pension varies from ANG 240 to 520 depending on age. A widow(er) with one or more children receives the maximum amount. The orphan's pension varies from ANG 174 to 240 depending on age, whether the person is disabled or enrolled in full-time education and whether he/she is categorized as a half orphan or full orphan. On remarriage a widow(er) who is entitled to such a pension receives a lump sum representing one year's pension. On the death of the widow(er) receiving the pension, an eligible dependant receives a sum equal to three months' pension allowance.

143. Pension contributions are paid in equal proportion by the employee and the employer and amount to 1% of the employee's income. No contribution is payable on income in excess of ANG 45,427.20 per year. The employer deducts the contributions and remits them to the SVB. The government pension fund provides for pensions for widow(er)s and orphans of government employees and civil servants. The amount depends on the last pay received and is supplemented by a cost-of-living allowance.

144. The 'Cessantia Act' stipulates that an employee who has played no part in the termination of his/her contract of employment is entitled to severance pay from the employer. This applies to civil servants, teachers and those employed under a fixed-term contract. The amount of severance pay depends on the employee's pay and on the number of years of service. If the employee receives a pension on termination of the employment contract and the pension is higher than the old-age pension, he/she does not qualify for severance pay. If the employer does not pay the severance pay, for whatever reason, it is paid by the SVB. The SVB is then entitled to recover that amount from the employer.

145. For the purposes of the Cessantia Act, a fund exists into which employers pay an annual contribution for every employee in their service. At the request of the employee, the Director of the SVB will decide whether he/she is eligible for severance pay. An application for review of this decision may be lodged with the Court of the island territory.

146. All employees who have been declared unfit for work as a consequence of an accident at work or on the way to or from work (taking the shortest route and the time the accident occurred into consideration) receive invalidity pay. In the event of complete incapacity for work 100% of the daily wage will be paid during the first year. In the case of partial incapacity, the employee will receive a proportionate amount of the daily wage.

147. Since 1999 pregnant employees have been entitled to sick pay for a minimum of six weeks preceding the expected date of delivery and six weeks following delivery (maternity leave). During this period the employer is obliged to pay the worker 100% of her daily wage. The SVB has a statutory duty to reimburse 80% of this daily wage.

148. The National Ordinance on Administrative Law (*Landsverorden ing administratieve rechtspraak – LAR*) entered into force on 1 December 2001. This has had implications for the Appeals Tribunal of the

SVB.

149. Civil servants and their family members are entitled to receive compensation for expenses incurred for medical treatment and care and other related costs. The government pays 90% of the expenses incurred and the employee 10%.

150. In connection with the reorganization of the government apparatus, redundancy pay will be awarded to discharged employees in compliance with the central government's Redundancy Pay Scheme (National Gazette 1986, no. 83).

151. Until January 2000 discharged employees could claim redundancy pay for four years at most. As of 2000 this term was reduced to a maximum of two years. Entitlement to redundancy pay depends on the number of years worked. Redundancy pay is allocated for two months for each year worked, up to a maximum of 24 months. In the first three months of the redundancy pay period 95% of the employee's last salary will be paid; during the following seven months 85% of the last salary is paid; for the following ten months 75% of the last salary is paid and, in the last four months of the reduced pay period, the discharged employee receives 70% of his/her last salary.

152. A pension is paid to widows and widowers of deceased civil servants as follows. On the death of a (former) civil servant, his/her widow/widower is entitled to receive a pension equivalent to 5/7 th of the pension that he/she would have received if the deceased person had reached the age of 60. Children under 18 receive 1/7 th of the orphan's pension.

153. As stated above, the precarious financial situation in the Netherlands Antilles led to the implementation of various cost-cutting measures in the 1990s. A number of measures were taken with regard to the pension scheme. In January 1996 the pensionable age was raised from 55 to 60.

154. In order to guarantee the pension rights of civil servants who were working for the government before 1 January 1996, the early retirement scheme was introduced. To qualify for this scheme employees must have 20 years of pensionable service, five of which were accumulated in the Netherlands Antilles, and the employee must be at least 55 years of age.

155. The revised Pension Scheme for civil servants came into effect in 1998. This revision introduced a market-related pension scheme. As of 1998 all employees working for the government and employees in organizations privatised by the government have been obliged to join the Netherlands Antilles Pension Scheme.

156. If a civil servant has been declared unfit for work due to an accident, irrespective of the place of his/her accident, he/she will immediately receive a disability allowance. The allowance is calculated on the basis of the number of working years he/she would have accumulated if he/she had worked until the age of 60.

Protection and assistance accorded to families

157. The introduction of reductions in working hours and part-time work for permanent government employees (National Ordinance of 23 December 1997, PB 1997, 313 and the 1998 provisions implementing legal status) makes it easier for them to combine work with care and domestic responsibilities.

Special protection during a reasonable period before and after the birth of a child

158. Pregnancy and maternity leave for women employees was brought into line with international standards through the introduction of the National Ordinance of 26 April 1999 amending the National Ordinance on Medical Insurance (PB 1966, no. 15) and the Civil Code of the Netherlands Antilles. In the view of the legislature, extending pregnancy and maternity leave is in line with the effort to emphasise the importance of family life and raising children within a family context, and to strengthen family values.

159. Under the National Ordinance, pregnancy and maternity leave was extended to a maximum of 12 weeks. This period is deemed to be a 'relatively short time' within the meaning of article 1614 of the Civil Code, so the employee remains on full pay throughout the period of leave. These arrangements also apply to female civil servants.

HIV infection

160. The figures present cumulative data from laboratory-based HIV registration for the five islands of the Netherlands Antilles from 1985 to 2004. The total number of known cases in 1985-2004 was 1530. Of

these, some may well be deceased, but the data on mortality cannot be merged with the HIV infection figures. Of the 1530 known HIV-positive individuals, 872 (57.0%) are male and 658 (43.0%) are female. Since 1990 there has been an average of approximately 84 new HIV infections per year in the Netherlands Antilles. HIV infection is more prevalent on Curaçao and Sint Maarten, with 1009 (65.9%) and 478 (31.2%) of all registered cases respectively. The majority (65.9%) of the registered HIV infections were diagnosed in the 25-44 age group and 3.8% were children diagnosed under 15 years of age. 9.3% of the HIV-positive individuals were diagnosed between 15 and 24 years of age.

Curaçao

162. Since abortions are not recorded on Curaçao, the number of teenage pregnancies is difficult to estimate. Although it is illegal to perform abortions, the practice does exist. It is usually performed by a general practitioner and no official record is kept.

163. Since 1995, the Age-Specific Fertility Rate (ASFR) of women aged between 15 and 19 has declined. The ASFR indicates the number of live births per 1000 women within the given age group. In the year 2000, the ASFR declined to the level of the late 1980s. The table below shows the ASFR of women aged 15 to 19 years between 1995 and 2000 on Curaçao.

Table 30 Age-specific fertility rate of women aged 15-19, Curaçao , 1995-2000

Year	ASFR

Article 13

164. Reference is made to previous reports.

Article 14

165. Reference is made to previous reports.

Part IV (articles 15-16)

Article 15

166. Reference is made to previous reports.

Article 16

167. The basic tenets are:

everyone old enough to marry and start a family is entitled to do so, irrespective of race, nationality or religion;

men and women have the same marital rights;

a marriage can be concluded only with the free and full consent of both partners;

the family is the natural basic unit of society and has the right to be protected by society and the State.

168. Book 1 of the New Civil Code of the Netherlands Antilles, dealing with family law and the law of persons (Official Bulletin 2000, 178), came into force on 15 March 2001.

Important changes

Divorce law

169. The old divorce law created many problems. The grounds for divorce were: adultery, desertion, receiving a prison sentence of four years or more subsequent to the marriage, and assaulting the spouse in such a way as to endanger life or inflict serious injury.

170. The ground most frequently cited was adultery. However, a spouse who had not committed adultery (or could not be shown to have done so) could block a divorce indefinitely. For this reason, the New Civil Code makes it possible to end a marriage in cases where divorce is opposed by one of the spouses.

171. Under article 150, a divorce can be granted in the case of couples who are not separated, at the request of either of the spouses or at their joint request. Article 151 provides that divorce can be granted at the request of either of the spouses on the grounds of irretrievable breakdown of marriage. Under article 154, divorce can also be granted on this ground at the joint request of the spouses.

The law of parentage

172. The law of parentage has been completely revised. The terms legitimate, illegitimate and natural child have disappeared and the distinctions between children born in and out of wedlock have been eliminated as far as possible. A married man who has a tie with a child may acknowledge the child as his.

Age of majority

173. The age of majority has been lowered from 21 to 18.

Other changes in the New Civil Code

174. Several other discriminatory provisions have been abolished in the New Civil Code. One example is the provision giving precedence to the will of the husband within marriage, for example with regard to the location of the marital home. The New Civil Code provides simply that such matters are to be agreed between the spouses, omitting the words “and in the absence of agreement by the man”.

175. The new power of the Dutch courts to rule on paternity has not been adopted in the Netherlands Antilles . In the European part of the Netherlands , a child with no legal father can seek such a judicial declaration of paternity. If the court rules that the man summoned to appear is indeed the father, the child acquires the right to inherit from him and a note to this effect is made in the Register of Births, Deaths and Marriages. In view of the controversy surrounding this change, it has been decided not to introduce the measure in the Netherlands Antilles for the time being. The only course at present open to such children in the Netherlands Antilles is to institute an action for maintenance. The man designated as the child's father following such an action will be liable only for the child's maintenance.

176. The law on names also remains unchanged. A child born in wedlock or acknowledged by its father takes the name of the father. The Supreme Court has already found that this provision discriminates against mothers (judgment of 23 September 1988, *Nederlandse Jurisprudentie* 1989, no. 740). The case concerned the law on names and the conflict between Dutch law (article 1:5, paragraph 2 of the Civil Code) and article 26 ICCPR. The issue at stake was the right of parents to choose a family name for their children and the fact that the right of biological parents to do so is guaranteed by article 26 ICCPR, even where the child is acknowledged by the father. Given the many conceivable systems within which such choices may be made, the Supreme Court feels that it is beyond its power to determine the law on this point (judgment of 12 October 1984, *Nederlandse Jurisprudentie* 1985, no. 230), and that it is for the legislature to decide how best to satisfy the principle enshrined in article 26 in this area. The advisory opinion of the Public Prosecution Service concerning the principle of equality (ban on discrimination) was as follows: even if the existing law on the naming of children is manifestly discriminatory, the Supreme Court has declined to declare it inapplicable as provided for in article 94 of the Constitution. To do so would indeed merely create a legal vacuum, since it would still be unclear what legal rule should apply instead. In view of the widespread debate that this ruling is expected to generate, it has been decided not to amend the law on names at this stage.

177. The National Labour Regulations 2000 (Official Bulletin 2000, 67) entered into force on 28 July 2000.

178. Article 25 of the Labour Regulations contains a number of special provisions applying to domestic personnel. Although mainstream provisions were difficult to apply to staff working in private households, it was thought desirable to establish specific standards for their working hours, total working time, days off and public holidays, overtime and breaks.

179. For this reason, the article provides that:

total working hours should not exceed 11 hours per day or 55 hours per week;

employees are entitled to one day off in every seven;

working hours should be between 6 a.m. and 10 p.m., unless the employee's duties relate exclusively or chiefly to the personal care of the employer or one or more members of the employer's household, and this care is intended to be provided exclusively or chiefly outside these hours;

employees should have a break of at least half an hour after every five hours of work;

employees should be given paid leave on public holidays;

work in excess of the maximum daily or weekly working hours specified under a. or work done outside normal working hours or during breaks must be paid at an hourly overtime rate 50% above the employee's normal hourly rate, with the time being rounded up on a half-hourly basis;

work done on weekly days off or public holidays must be paid at an hourly overtime rate 100% above the employee's normal hourly rate, with the time being rounded up on a half-hourly basis.

180. Another important point is that the previous Labour Regulations of 1952 made it illegal to employ women and young people to work at night or to do any kind of paid or unpaid work defined by country edict as dangerous. This prohibition now applies only to young people (aged 15 to 18). Article 20 stipulates that it is illegal to employ young people to work before 7 a.m. or after 7 p.m., while article 21 makes it illegal to employ them to do dangerous work.

National Ordinance on the flexibilization of labour law (Official Bulletin 2000, 68)

181. This Ordinance amends title 7A of Book 3 of the Civil Code of the Netherlands Antilles . The amendments to article 1615e are particularly important. A number of new paragraphs have been inserted

(paragraphs 3 to 8) but only paragraphs 3 and 4 are relevant to this report. These read as follows:

Any clause enabling employment to be legally terminated due to the marriage of the worker shall be null and void.

Any clause enabling employment to be legally terminated due to the pregnancy or confinement of the worker shall be null and void.

182. These two paragraphs automatically invalidate any clause in a contract of employment that stipulates that the contract can be legally terminated if the employee marries, becomes pregnant or gives birth to a child.

183. These changes protect employees against the possible disadvantages of greater flexibility in the labour market. The sanction on infringement is that the offending clause is rendered null and void. In this context, see judgment of the Supreme Court of 29 October 1999, *Nederlandse Jurisprudentie* 2000, no. 51; New Civil Code, article 7:670, paragraph 4; old Civil Code, article 1639h, paragraph 4; Civil Code of Aruba, article 1615h, paragraph 2, and the Charter for the Kingdom of the Netherlands, article 39, paragraph 1.
